Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 27, 28, 29, 34-43 drawn to an isolated C140 receptor (SEQ ID NO:2) polypeptide (or the recited portions thereof) encoded by a nucleic acid molecule which hybridizes under stringent conditions to SEQ ID NO:1, classified in class 536, subclass 23.1.
- II. Claims 27, 28, 30, 34-43 drawn to an isolated C140 receptor (SEQ ID NO:4) polypeptide (or the recited portions thereof) encoded by a nucleic acid molecule which hybridizes under stringent conditions to SEQ ID NO:3, classified in class 536, subclass 23.5.
- III. Claims 27, 28, 31, 34-43 drawn to an isolated C140 receptor (SEQ ID NO:61) polypeptide (or the recited portions thereof) encoded by a nucleic acid molecule which hybridizes under stringent conditions to SEQ ID NO:60, classified in class 536, subclass 23.1.
- IV. Claims 27, 28, 32, 34-43 drawn to an isolated C140 receptor (SEQ ID NO:63) polypeptide (or the recited portions thereof) encoded by a nucleic acid molecule which hybridizes under stringent conditions to SEQ ID NO:62, classified in class 536, subclass 23.5.
- V. Claim 33, drawn to SEQ ID NO:19, classified in class 536, subclass 23.1.
- VI. Claim 33, drawn to SEQ ID NO:20, classified in class 536, subclass 23.5.
- VII. Claim 33, drawn to SEQ ID NO:21, classified in class 536, subclass 23.1.
- VIII. Claim 33, drawn to SEQ ID NO:22, classified in class 536, subclass 23.5.

Art Unit: 1636

The inventions are distinct, each from the other because of the following reasons:

Inventions I-VII and VIII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions involve different polypeptide sequences, each with a distinct, unrelated, amino acid sequence wherein a search of one would not be co-extensive with a search of the others. Nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
